

The SOB TAC-WALL™ is a revolutionary new concept in personal defense brought to you by Special Ops Bunker. It consists of lightweight ballistic shields that can be used independently or in combination. What makes the TAC-WALL™ incredibly versatile is that the individual shields can be quickly linked together, side-by-side, to form a continuous, freestanding ballistic wall. All shields are identical, so there is no limit to the number of shields that can be linked together.

The design team at Special Ops Bunker has gone over the top to make the TAC-WALL™ reliable and easy to use. Handles and other optional components are affixed using QD attachments and an integrated M-LOK rail system, making the system extremely customizable. A rigid carry bar allows for comfortable transport of multiple TAC-WALL™ shields. The hardware used to link TAC-WALL™ shields is entirely integrated into the system, so no need to worry about loose parts getting misplaced or lost during an operation. With the optional Vehicle Attachment System, TAC-WALL™ shields can be hung from the side of a vehicle to provide ballistic protection for "soft-skin vehicle rescues." The TAC-WALL™ is also designed to integrate seamlessly with other SOB products such as the SENTRY™ defense system.

As with all SOB defense systems, viewports and bolt faces are certified to the same ballistic rating as the surrounding armor.
